- C. Additional Limitations on Binding New Business

The Company is able to consider new applications for coverage originating in all areas of Florida. However, the Company must ensure that applications received for risks located in areas of the state in which the Company has existing concentrations are assessed for their effect on the Company's overall exposures. From time to time, the Company will identify the areas in which the Company will not authorize the binding of coverage and will require the submission of all policies unbound according to the procedures described below or areas, forms, or limits in which the Company is unable to consider the acceptance of policies.

All risks not meeting these requirements that include wind coverage in these areas must be submitted on a non-bound basis for consideration. Documentation regarding the unbound risks should be submitted with the application as provided in D. below.

- D. Unbound Applications

Risks not qualifying with all requirements contained in this manual may be submitted on a non-bound basis for consideration. The following documentation will be required with the application:

2.      Consideration of Risks

Unless the context otherwise requires, provisions of this Manual providing for assessment of risks include underwriting considerations relevant to the insured property and the applicants, insureds, or residents, as the case may be.

3.      Overall Risk Assessment

The Company at its discretion may insure a risk not meeting one or more binding or eligibility criteria if the Company determines that the risk is desirable in light of unique risk characteristics or information available to the Company. (Example: A risk having a swimming pool with a slide is ineligible for coverage. However, the risk may be submitted unbound for special underwriting consideration and may be determined eligible for coverage if other risk characteristics are superior.)

The Company also at its discretion may determine that a risk meeting eligibility or binding requirements is not eligible for coverage. (Example: The property is an older home without recent updates but is within the guidelines. However, inspection reveals poor care of the exterior of the dwelling and risk hazards in the yard.)

4.      Application of Florida Insurance Code

The Company's Manual is intended to provide guidelines and procedures for the Company's usual and customary review, rating, and acceptance of policies in accordance with the provisions of the Florida Insurance Code. To the extent a risk contains characteristics or includes considerations beyond the scope of this Manual, refer to the requirements of the Florida Insurance Code and related administrative rules or interpretations. Consult the Company any questions or considerations that are not otherwise addressed.

2.      In some communities, two BCEGS grades may be assigned. One grade will apply to one and two family dwelling buildings and/or personal property contained in such buildings. The other grade will apply to all other buildings occupied for residential, commercial and/or manufacturing purposes including personal and business property contained therein.
3.      The BCEGS grades for a community, and their effective dates, are provided in the Protection Class/BCEGS Section of this Manual.
4.      A Building Code Compliance rating factor does not apply when the peril of Windstorm or Hail is excluded from the policy.

B.      Community Grading

1.      The BCEGS grade applies to any building that has an original certificate of occupancy/ completion dated in the year of the effective date of the community grading, or later.
2.      If a community is re-graded, the factor for the revised grade applies to buildings that have an original certificate of occupancy dated the year of the revised grading, or later.
3.      If, due to an addition or alteration, the original building is changed to comply with the latest building code, the factor for the community grading applicable at the time the reconstruction is completed will apply to such building.
4.      Communities that decline to participate in the BCEGS Program will be identified as not participating and will receive a premium surcharge, unless they qualify for Individual Grading. This surcharge will apply to any building that has an original certificate of occupancy dated in the year of the effective date of the community evaluation that indicates the community as not participating.

C.      Individual Grading

Where buildings have been built in full conformance with the natural hazard mitigation elements of one of the nationally recognized building codes, even though the community grade is greater than "1", or the community is not participating in the program, exception rating procedures may apply.

Any building may be classified as Grade one "1" for Windstorm/Hail upon certification by a Florida licensed architect or structural engineer, based on an onsite inspection, that such building is in compliance with one of the three nationally recognized building codes with respect to mitigation of the Windstorm and/or Hail hazard. This classification is effective only from the date of the certification.

Any costs associated with this provision are to be paid by the insured.

Note: Submit "Individual Property Certification", Form UPCIC-95.

D.      Upgraded and Non-Participating Risks

Buildings which do **not** qualify for Community or Individual Grading are classified as upgraded or non-participating risks. Do **not** classify as Grade "10".

E.      Premium Computation

Dwelling - Community Grading

Compute the premium credit or debit as follows:

- a.      Multiply the KEY PREMIUM for EXTENDED COVERAGE for buildings and contents by the appropriate factor shown in the applicable table.
- b.      Multiply the result above by the KEY FACTOR for the desired amount of insurance.

**B. The Company does not use credit reports or a credit scoring system in initial underwriting, provided, however, that the Company may obtain a credit report to verify representations made by the applicant, insured, or resident. In the event the Company obtains a credit report for verification purposes, the following will apply:**

1. The Company will not request a credit report based upon the race, color, religion, marital status, age, gender, income, national origin, or place of residence of the applicant, insured, or resident.
2. The Company will obtain credit reports only from nationally recognized consumer credit reporting agencies (Equifax, Transunion, etc.) or their successors.
3. The Company will not make an adverse decision based solely on the basis of information in a credit report without consideration of any other underwriting or rating factor.
4. The Company will not make an adverse decision based in whole or in part on the absence of a credit history or insufficient credit history, collection accounts with a medical industry code (if identified in the credit report), place of residence, or any other circumstance set forth in a rule promulgated by the Florida Financial Services Commission.

The Company will complete its review within ten business days of the applicant's or insured's submission of a request and the Company's receipt of supporting documentation. If the Company determines that the credit report was unduly influenced by any of the listed factors, the Company will treat the applicant, insured, or resident as having neutral credit information or will exclude the credit information, whichever is more advantageous.

7. If an applicant, insured or resident believes that a credit report contains erroneous information and pursues correction with the applicable reporting agency, the Company will accept a new application and initiate a new underwriting process based upon the corrected information.
8. Any insured adversely affected by credit history at the initial rating of the policy will be reevaluated within the first three years after inception based upon other allowable underwriting and rating criteria.
9. The Company's use of credit reports is limited to verification of information provided by the applicant, insured or resident. The Company does not use credit information in policy rating and therefore no use of credit scores will apply to any separately identified component of premium attributable to hurricane risk.

**301. BASE PREMIUM COMPUTATION**

- A. To compute the BASE PREMIUM, use the Key Premiums and Key Factors that are displayed below based on coverage form shown below.

For Form DP 00 01:

Develop separate BASE PREMIUMS on buildings and/or contents for:

Fire only, or  
Fire and Extended Coverage, or  
Fire, Extended Coverage and V&MM.

For Form DP 00 02:

Develop separate BASE PREMIUMS on buildings and/or contents for:

Fire and Broad Form.

For Form DP 00 03:

Develop separate BASE PREMIUMS on buildings and/or contents for:

Fire and Special Form on the building;  
Fire and Broad Form on the contents.

Coverage A - Dwelling

Coverage C - Personal Property

1. From the Key Premium Table, select the Key Premium for the classifications or coverages that apply to the risk.
2. From the Key Factor Table, determine the Key Factor for the desired limit of liability. If the limit of liability is not shown in the table, determine as illustrated in Paragraph B. of this rule.
3. Multiply the Key Premium by a Key Factor and round to the nearest whole dollar to develop the BASE PREMIUM (\$.50 or more rounded to the next higher whole dollar).

**B. Interpolation Example**

When the desired limit of liability is less than the highest limit shown, interpolate the Key Factors using the nearest limit above and below the desired limit.

Example: Using Key Factors for Seasonal and Non-Seasonal Owner Occupied Properties:

\$25,500 desired limit; the nearest limits are \$24,000 and \$26,000.

For \$24,000 the Key Factor is 1.065; for \$26,000 the Key Factor is 1.098. Figure the difference between the two Key Factors and divide by 20. This provides a factor per \$100.

$$\begin{array}{r} 1.098 \\ - 1.065 \\ \hline .033 \text{ divided by } 20 = .0016 \end{array}$$

Multiply the factor per \$100 times 15, and add 1.065, the Key Factor for \$24,000.

$$\begin{array}{r} .0016 \\ \times 15 \\ \hline .024 + 1.065 = 1.089 \end{array}$$

The result, 1.089, is the Key Factor for this example.

## 904. SINKHOLE COVERAGE

### A. ELIGIBILITY

1. The base policy covers Catastrophic Ground Cover Collapse. Sinkhole coverage is not included in the base policy but may be purchased for an additional premium subject to underwriting requirements.
2. For all territories Sinkhole coverage cannot be bound. Requests to add sinkhole coverage must be submitted for prior underwriting review and approval. The following requirements apply:
  - Sinkhole coverage may be issued only at inception or at the policy renewal date pursuant to a request submitted prior to inception or the renewal date. To add Sinkhole coverage as of a renewal date, the completed request must be received by the Company at least 90 days before the renewal date. Sinkhole coverage cannot be added mid-term. Sinkhole coverage may be removed mid-term.
  - A request to add Sinkhole coverage must be accompanied by the Company's supplemental Sinkhole application and by a Sinkhole inspection report from a Company-approved inspection vendor. The applicant is responsible for one-half of the vendor's inspection fee and the Company is responsible for the other half. The applicant is responsible for contracting with the inspection vendor and for paying the applicable fee. The inspection fee is not refundable or reimbursable regardless of the underwriting decision reached by the Company.
  - Sinkhole coverage may be written only if (i) there are no indications of past, present or potential Sinkhole activity or loss on the property, (ii) there is no proximate (less than one (1) mile) Sinkhole activity or Sinkhole loss, and (iii) the applicant has not previously submitted a claim for Sinkhole loss to any insurer for the property proposed to be insured, and (iv) the applicant has not received notice or otherwise been advised of prior Sinkhole activity or Sinkhole loss relating to the property proposed to be insured. Indications of potential Sinkhole activity or Sinkhole loss include, but are not limited to:
    - Cracks in the interior joint areas, windows and doors. These cracks could occur at the foundation of the floor moving up to where the ceiling meets the walls, corners of walls and/or doors or occur above or below the windows,

    - Slope in floor of structure,
    - Cracking/buckling/unlevel concrete interior finished or slab floors,
    - Significant cracks or unlevel exterior or interior concrete surfaces,
    - Visually apparent dips or depressions in the ground,
    - Windows or doors that will not open or close properly, and
    - Listing, leaning or buckling of walls or other vertical supports
- All sinkhole coverage, if issued or renewed, will be written with a 10% deductible.

**923. RESERVED FOR FUTURE USE**

**924. WINDSTORM LOSS REDUCTION CREDITS**

**A. QUALIFICATIONS**

When a policy covers the perils of Windstorm or Hail a risk may be eligible for a premium credit upon appropriate underwriting and, where applicable, the Company's receipt of an attestation as described below. The credits are listed on the following tables. Please refer to the appropriate table for existing homes or for new construction permitted after March 1, 2002 (the effective date of the Florida Building Code (2001)).

The applicant or insured may obtain the hip-roof credit by submitting pictures showing the entire roofline of the dwelling and a statement from the insured that the pictures depict the insured dwelling.

For all other credits applicable for dwellings permitted prior to March 1, 2002, the applicant or insured must submit a Windstorm Loss Reduction Credit Verification Affidavit in order to qualify for credits. The form must be completed by a licensed building contractor or a registered architect or engineer or a building code official. A dwelling permitted prior to March 1, 2002, is not required to meet all of the minimum standards of the Florida Building Code (2001) in order to qualify to the credits. Credits will apply to dwellings permitted after March 1, 2002, based upon application for the Florida Building Code in the territory in which the dwelling is located, subject to the company's right to request verification of construction features.

The policyholder is responsible for providing proof of compliance and for all expenses associated with substantiating the existence of mitigation features. Partially completed forms will receive credit to be determined using the information that is provided and assuming that the home contains no other credit features.

HVHZ = HIGH VELOCITY HURRICANE ZONE (Miami-Dade and Broward counties, FBC sections 202 AND 1611ff)

WBDR = WIND BORNE DEBRIS REGION (Areas with windspeeds in excess of 120 MPH and/or areas within one mile of the coast where wind speeds are 110 MPH or higher. Panhandle Protection Provision Zone—From Franklin County to the Florida-Alabama state line, the WBDR is restricted to the area within one mile of the coast.)

SWR = SECONDARY WATER RESISTANCE (A layer of protection that protects the building if the roof covering fails, such as a self-adhering modified bitumen tape applied to the plywood joints, application of a foamed polyurethane structural adhesive form inside the attic to cover joints between all plywood sheets, or for a metal roof, the use of tar to cover any perforations in the deck associated with the mechanical attachments of the deck to the underlying joist structure.)

REINFORCED CONCRETE ROOF DECK includes SWR; Integral with Reinforced Masonry Walls

The following additional descriptions apply:

Terrain Exposure C: Applies to all areas in the HVHZ, the barrier islands and that area which lies within 1500 feet of the coastal construction control line or within 1500 feet of the mean high tide line, whichever is less.

Terrain Exposure B: Applies to all other locations in Florida not defined by the HVHZ, WBDR or Terrain Exposure C.

**Internal Pressure Design:**

- a. Enclosed—An enclosed structure is designed assuming that all openings are closed and therefore the wind loads are determined using a small internal pressure inside the building.
- b. Partially Enclosed—A partially enclosed building is designed assuming that one or more areas of the building are open to allow wind to enter the building and pressurize the interior. This pressurization means that the individual parts of the building must be designed to withstand greater wind loads than an “Enclosed” building and thus are stronger than the similar features of an “Enclosed” building.

**Roof Shape:**

- a. Hip Roof--A hip roof has sloping ends and sloping sides down to the roof eaves line.
- b. The “Other” roof construction designation applies to all roof shapes other than hip.

**Roof Cover:**

- a. FBC Equivalent—FBC Equivalent roof coverings are those that meet the standards of the Florida Building Code (2001) for improved material requirements and attachment methods.
- b. Non-FBC Equivalent—Any roof covering that does not meet the requirements of the 2001 Florida Building Code.

**Roof to Wall Connection:**

- a. Toe Nails—A connection where approximately three nails are driven at an oblique angle through the rafter and into the top plate.
- b. Clips—Pieces of metal that are nailed into the side of the rafter/truss and into the side of the top plate or wall stud.
- c. Wraps—Single wraps are wrap style straps that are attached to the side and/or bottom of the top plate and are nailed to the rafter/truss. Double wraps are wrap style straps that are wrapped on both sides and have double the capacity of the single strap.

**Roof Deck Attachment:**

- a. Type A—Plywood/OSB nailed with 6 penny common nails at 6” spacing on the edge and 12” in the field on 24” truss spacing.
- b. Type B—Plywood/OSB nailed with 8 penny common nails at 6” spacing on the edge and 12” spacing in the field on 24” truss spacing.
- c. Type C—Plywood/OSB nailed with 8 penny common nails at 6” spacing on the edge and 6” spacing in the field on 24” truss spacing.
- d. Type D—Dimensional Lumber and Tongue and Groove Decks

**Protective Devices on Structure Openings:**

- a. None—None existing, or any protection devices other than Basic or Hurricane protection devices.
- b. Basic—Opening protections that were designed prior to the SFBC/SSTF 12/ASTM E 1996 standards and therefore are considered untested.
- c. Hurricane—Opening protections that are designed for impact resistant standards of SFBC/SSTD 12/ASTM E 1996. These standards apply to both impact resistant glazing and impact resistant coverings (i.e., shutters).

**Reinforced Concrete Roof Deck:** A roof deck that is designed and constructed in accordance with the provisions of ACI 318 (American Concrete Institute), including integral construction with a masonry wall system.
